Hussmann Purchases a Sales Agent in North America

Panasonic, through Hussmann Services that is under the umbrella of Hussmann, Panasonic's subsidiary in North America, has completed the procedures for purchasing all businesses of Southern Refrigeration, and absorbing them into Hussmann Services.

Southern Refrigeration is an independent business entity undertaking sales, installation and maintenance of refrigeration equipment and commercial air conditioners, having a strong foothold in its relationship with local customers in the Southern States of the United States. Since 2015, based on an agent agreement with Hussmann, the company has undertaken sales, installation and maintenance of Hussmann products in Louisiana, Texas, Arkansas, Mississippi, and Alabama. Hussmann, through its subsidiary Hussmann Services, has decided to purchase Southern Refrigeration in the form of transfer of assets. This move is designed to further strengthen response capability of customers in those states. Southern Refrigeration will continue to handle its operations as a department of Hussmann Services.

Cvsair Installs Fans at Istanbul Airport

The largest airport in the world is being built in Istanbul. More than 150 airlines will provide flights to more than 350 destinations. When opened, the airport will have a capacity of 90 million passengers per year, and an indoor carpark accommodating 25,000 cars.

More than 300 suppliers have created high-tech products for this airport. Cvsair produced MRF motorized covered roof-type smoke exhaust fans for the carpark, which is Europe's largest indoor parking area.

A total of 375 MRF motorized covered roof-type smoke exhaust fans will remove stale air from the airport and provide fresh air to the parking area.

In additon, the air traffic control tower has won an award in the Future Projects – Infrastructure category at the International Architecture Award and World Architecture Festival. With an area of 6,085 m², 17 floors and a height of 90 meters, the air traffic control tower will be ventilated by Cvsair ventilation systems.

Cvsair is also handling smoke evacuation of the Terminal which has an air mass of 20 million m³.

For the third airport project, Cvsair also provided more than 17,000 canal fans, tunnel jet fans, axial smoke exhaust fans, axial fresh air fans and cell fans.

Cvsair ventilation systems will be installed in the futuristic air traffic control tower

Bitzer's Outstanding Green Point Award 2018 Goes to Thermocool

The Outstanding Green Point Award was presented at the Green Point Conference in Beijing on June 11 to 12. Thermocool from Moscow, Russia is this year's winner.

Bitzer's Green Point service network maintains, overhauls and repairs Bitzer compressors. The network consists of numerous members who have long-standing partnerships with Green Point.

Philippe Maratuech, managing director, Green Point and director services and after-sales at Bitzer, comments: "I am delighted to present this year's Outstanding Green Point Award to Thermocool. Its Bitzer repair workshop opened in 2002 and has repaired more than 3,000 compressors since then. We wish to thank Thermocool for this long-standing partnership and their loyalty." Sergei Demidov, engineer at Thermocool, adds: "It is an honor for us to be awarded the Outstanding Green Point distinction. Since joining the Green Point network, our sales have increased by 35% – the award underlines this success and will spur us on further."

Thermocool has been in the refrigeration business for 20 years and in this time has developed into one of the largest, most advanced refrigeration companies in Russia. All of the systems it manufactures are fitted with Bitzer compressors and pressure vessels. In 2015, Thermocool decided to expand its service center into a fully fledged Green Point in order to provide its customers with higher service quality.
